

User Acceptance Testing Report

Checkly
Team 10
July 3, 2026

1 Introduction

Checkly is an AI-powered checklist platform that enables users to create, manage, complete, and modify checklists within a single web application. The platform's main value proposition is the integration of AI assistance throughout every stage of the checklist workflow.

Conducting User Acceptance Testing (UAT) was essential to validate that the application meets the needs and expectations of its intended users. As students at the Technical University of Munich (TUM), we primarily targeted professionals within the university environment, including professors, doctoral researchers, and other academic staff, as they closely match our envisioned user base. Since the project was initially developed in collaboration with **RÖSBERG Engineering**, who provided the initial idea and requirements, we considered their feedback to be highly valuable. Although the collaboration ended at an early stage due to their limited capacity to supervise the project, and we subsequently developed the concept in a more generalizable direction, they still represent one of our key target audiences.

The primary objective of the UAT was to evaluate the platform from several perspectives, including its technical functionality, usability, user experience, and overall usefulness. We assessed whether the application operated reliably across different browsers and devices, whether the interface was intuitive and easy to use, and whether the implemented features effectively addressed the intended problem while providing meaningful value to users. In addition, we collected suggestions for future improvements and measured overall user satisfaction to better understand how well the platform met the expectations of our target audience.

2 User Case Study

2.1 Target Audience

Our primary target audience is the B2B sector, particularly professionals who rely on structured checklists as part of their daily workflows. This includes technicians, field workers, inspectors, quality assurance teams, project teams, event organizers, and small businesses. These examples are representative rather than exhaustive, as the product is designed for anyone who regularly performs repetitive, process-driven tasks that require structured documentation.

The common characteristic of our target users is that they spend a significant amount of time manually creating, maintaining, and updating checklists. Checkly addresses this problem by enabling users to generate, modify, and manage checklists in a smarter, faster, and more efficient way through AI-assisted functionality, significantly reducing the time and effort required for these repetitive tasks.

2.2 Why This User Group?

Explain why this user group represents your intended audience.

Lorem ipsum dolor sit amet...

2.3 User Needs

Describe the main problems the application is intended to solve.

- Need 1
- Need 2
- Need 3

3 User Survey Design

The following evaluation process was designed to assess the usability and usefulness of the application.

3.1 Testing Procedure

Each participant was asked to complete the following tasks:

1. Create an account / log in.
2. Perform Task 1.
3. Perform Task 2.
4. Use the GenAI functionality.
5. Complete the feedback questionnaire.

3.2 Evaluation Criteria

Participants evaluated the application according to:

- Ease of use
- Interface clarity
- Performance
- Feature usefulness
- Overall satisfaction

3.3 Survey Questions

Example questions:

1. How easy was the application to use?
2. Did the application solve your problem?
3. Which feature was the most useful?
4. Which feature needs improvement?
5. Would you use this application again?

4 User Survey Results

A total of [5] participants completed the survey.

Participant	Summary
User 1	Placeholder
User 2	Placeholder
User 3	Placeholder
User 4	Placeholder
User 5	Placeholder

5.3 Planned Improvements

Describe which suggestions will be implemented and which cannot currently be implemented.

Feedback	Action	Status
Placeholder	Improve UI	Planned
Placeholder	Not feasible	Deferred
Placeholder	Implement feature	Completed

6 Conclusion

Overall, the User Acceptance Testing demonstrated that the application [**met** / **partially met** / **did not meet**] the expectations of the target users. The collected feedback provides valuable guidance for improving usability and prioritizing future development.

Appendix (Optional)

- Full questionnaire
- Additional screenshots
- Raw survey responses
