Checkly is an AI-assisted checklist tool: you create a checklist, optionally attach a PDF for context, and then fill it out — checking off items, adding photos, and using an AI assistant to help build or complete it.

Possible use cases (pick whichever fits you, or invent your own): a safety inspection, an equipment/maintenance check, a quality audit, a site walkthrough, a recurring cleaning or setup routine, an onboarding/training checklist, or a packing/travel checklist.

Feel free to explore the app on your own. If you'd like some guidance, here are a few recommended steps:

1. **Sign up / log in** at the link above.
2. **Create a new checklist** with a title and description.
3. **Upload a PDF** as context for the checklist.
4. **Build out the checklist:** add a section and a mix of item types (checkbox, text, photo).
5. **Use the AI Assistant** to add or modify something in the checklist.

6. **Run through the checklist:** check off items, fill in a text field, and upload a photo as evidence.
7. **Check the dashboard** for progress / stats on the checklist.
8. **Export the checklist to PDF.**
